Professional Experience

2022 - 2025 GoGrow - Engineering Lead

In my three years working for GoGrow, I contributed on the front-end side to build marketplaces for growing start-ups, using Next.js (v14-v15) as the main stack, styling with TailwindCSS and creating search interfaces with Algolia’s InstantSearch, either using their engine or Typesense; as an Engineering Lead, I spent time analyzing projects and providing estimations, doing extensive code reviews over different repositories to meet the company’s best practices, guiding lower seniority roles; the role also required finding ways to innovate in the engineering area by defining practices, exploring and incorporating new tools.

2020 - 2022 OneTree - React Developer

Contributed as a React Developer, building SharePoint webparts from scratch using SPFx framework (with React and TypeScript), pnp-js for data integrations and jsPDF for reporting, also working on the automation of common workflows using Azure Logic Apps, being responsible for the deployment and maintenance of each. I also took part in other team role tasks, relieving requirements directly from the costumer alongside Business Analysts, creating user stories, doing project estimations, and helping with the products roadmaps.

2019 - 2020 Ascentis - Software Engineer

Contribute as a front-end developer in multiple scrum teams creating and handling reusable components for payroll solutions using React, Redux, BEM and Sass. Had active involvement in the rebranding process of the company, working with different HR products and technologies (such as Java Server Pages and ASP.NET) alongside their development teams over large code repositories.

2017 - 2019 GSOFTE Uruguay - Jr. Analyst

Long-term full-stack contributor over Factura Express, an electronic invoicing application that allows users to sell, control their products stock and do financial accounting, giving useful reports for strategical decision making. I relieved software requirements directly from customers and managers for the development and maintenance of functionalities written with JSP, JS, jQuery and Bootstrap, performing code and SQL query improvements for the web application its selling Jaspersoft reports. I also spend time on customer assistance, performing product training and solving doubts about the product, accountability and technical stuff about electronic invoicing.

Education

Universidad Católica del Uruguay

2022 - 2024 Bachelor Degree in Software Engineering

2016 - 2020 Bachelor Degree in Computer Science

Skills

Web Development

NextJS, React, SPFx, Zustand, Redux, JSP, jQuery, Tanstack Query, Sass, TailwindCSS.

Programming Languages

JavaScript/TypeScript, Java, Python, C#.

Databases

MySQL, SQL Server, PostgreSQL, Algolia, Typesense.

Languages

Spanish (native), English (advanced).
